

Megami EG Series

Elite-Grade process ink is a premium formulation for high quality production. Megami EG maintains a wide operator's window and excellent press stability. Color control and stability are achieved on a broad range of mid to high-speed Presses and EG attains remarkable balance on light and heavy coverage forms. Oldham is an Exclusive Megami Branded Manufacturing Partner in twenty-six states.

Color Management

At Oldham the ink formulary process begins with emphasis on color management. We have merged formulation expertise with prepress color management technology to create our **PRINTSOLUTIONSGROUP** (PSG). Our Ink Division and PSG services team bridge the gaps between plate curves, proofing and pressroom, we close the color control loop between press and prepress. Oldham provides a color-managed ink solution that is crucial to efficient and profitable production. Our Gap Analysis optimization process ensures accurate press to proof color alignment. Ask about the core color services offered by our **PRINTSOLUTIONSGROUP**.

Super Fast Set/Dry

EG contains a unique drier system that provides faster set and dry than traditional drier systems. This proprietary drier allows EG to set fast with a durable gloss finish. Work and turn quickly on difficult substrates and move jobs to finishing more quickly. Run deep lifts with normal powder application; when properly run you will not experience offsetting. Efficient production results from quick roll-up and color response with long run stability.

Matte, Dull, Offset and Satin Stock

Great holdout and set characteristics on a wide variety of uncoated, Matte or dull-coated stocks

Press Stability

Efficient production results from quick roll-up and color response with long run stability. Elite Grade is stable on press; it holds color and consistent dampener settings through speed changes and shutdowns. Heavy coverage to light coverage EG responds quickly with a wide variety of dampeners and solutions.

OG Brand Blankets
& Press Chemistry

Run Dry and Clean

EG is compatible with a wide range of Fountain solutions. And EG has been balanced with our OG Ultra Sheet Solution and Replacer to run dry and clean. Ask for our no charge start-up assistance to achieve optimal blending ratios on your equipment.

Coatable

UV and aqueous coatable, laser safe and works well with lamination. Post press operations should always be tested prior to production run.

Extended Stay Open

Stay open in the can and fountain. EG will remain open in can and fountain for 80+ hours. Actual stay-open period will be dependent on environment. Air movement across open fountain and heat will decrease open time.

Availability EG is available in 4C process.
