
OG-626 Calcium Remover

Ink Roller Calcium Remover

Product Description

OG-626 Calcium Remover is a cleaner for the build-up of calcium salts on ink rollers. It is fast, complete, and safe when used as directed. OG-626 contains wetting agents to provide optimum roller coverage without any slinging. Regular use is recommended to prevent excessive accumulation of calcium in the ink train.

Product Application

Calcium salts are introduced on rollers from ink paper and hard water. These salts can accumulate on ink rollers and cause reduced ink transfer and stripping. Regular roller solvents, deglazers and cleaning pastes will not remove calcium. OG-626 Calcium Remover should be used as part of a regular roller maintenance program.

Technical Specifications

Flash Point (°F TCC)	>200
VOC (lb./gal method 24)	0.43
Specific Gravity	1.04
Water-Miscible	Yes
Color	Colorless
Odor/Fragrance	None

Features and Benefits

- *Strong calcium cutting formula completely removes deposits.
- *Eliminates roller stripping due to calcium
- *Fast, east two-step cleaning.
- *Safe for rollers and press.

Directions

Clean all the ink from the press rollers with a good one-step wash like OG-120 Wash. After the rollers are free of ink and dry, disengage the wash-up blade and apply OG-626 Calcium Remover. A milky appearance on the rollers is calcium being removed. Add additional OG-626 if necessary to keep rollers wet. Allow the press to idle for 3-5 minutes and engage the wash-up blade. Wash out residue with OG-626. After 2 - 3 minutes thoroughly rinse well with water. If rollers were badly glazed, inspect to be certain that NO WHITE CALCIUM SALTS ARE LEFT ON THE ROLLERS. If there are still deposits, repeat the cleaning cycle.
