

JetSet SF & DX PANTONE Color System

PANTONE Registered blending system perfectly balanced for quick color matching. JetSet can be ordered as drier enhanced "DX" or in a stay fresh formula "SF". The SF formula can be drier added during the blending process thus avoiding the costly waste from "skinning" the can prior to use.

Color Accuracy

In our manufacturing Quality Control color lab we verify color space and pigment strength for each batch of PANTONE base color thus ensuring correct color blends the first time. We supply base colors in containers to support manual and dispenser blending.

Quick Set and Dry

Work and turn quickly allowing for greater efficiencies in production scheduling. We can adjust tack, flow, drier load... per substrate, just ask for an ink technician to help place your order.

Press Stability

JetSet is stable on press; it holds color through speed changes staying in balance and comes up to color quickly on restarts.

Tack Adjustable

JetSet has a wide operating window at both ends of the tack range. On the high end, we can run a HT formula for small press and specialty applications and on the low end, the LT formula performs well on large high-speed equipment.

Good Gloss

Exhibits good gloss characteristics with a tough durable finish

Coatable

UV and aqueous coatable, laser safe and works well with lamination. We have imitation matches for all the shades that are subject to shade shift issues under coating and exposure. Post press operations should always be tested prior to production run.

Extended Stay Open

SF stays open indefinitely and DX will remain open in the can and fountain for about 72 hours, we recommend cleaning the ink train when the press is down for extended periods. Actual stay-open period will be dependent on environment.

Dispensing System

We support the GFI dispensing system for fast and accurate blending. Please call for equipment program details information and pricing.

Technical Considerations:

The information and recommendations in this publication are, to the best of our knowledge, reliable. Suggestions made concerning uses or applications are only the opinion of The Oldham Group (TOG), and users should make their own tests to determine the suitability of this product for their own particular purposes. However, because of numerous factors affecting results, TOG makes no warranty of any kind, expressed or implied, including those of merchantability and fitness for particular purpose, other than that the material conforms to its applicable current Standard Specifications. Standard Specifications, although current at the time of publication, are subject to change without notice. Please refer to the MSDS for additional information. DATE REVISED: 09/02/2008
